- JLM Audio Mod Ideas**
- Mod input to be good transformer in mic pre by cutting tracks and adding 1:1 or 1:2 input transformer and reusing the 5k rev log pot on the front panel.
 - Change TL074 opamps to LM837 type which can drive 600ohm loads.
 - Convert Line input jack to Line out for zero latency monitoring and so mic pres can be used in other analog systems.
 - Change 22uF caps to Bi polar types
 - Remove output 220R resistors and wire 1:1 output transformer to the four solder pads.
