

Note 1
This regulator
only needs to be
fitted if opamp
runs on less than
48v (+/-24v)
or higher than 48v
is connected at +

RED LED mounts on
48v switch top 2 legs
with Anode (long leg)
on the leg closest to
PCB edge.

RPad = Resistor to set PAD attenuate level
RLoad = Resistor load for input transformer secondary loading
RZobel = Resistor part of zobel load for input transformer secondary loading
CZobel = Capacitor part of zobel load for input transformer secondary loading
RGain = Sets maximum gain of mic pre amp
